Big Data and Cognitive Computing

Big Data and Cognitive Computing is an international, peer-reviewed, open access journal on big data and cognitive computing published monthly online by MDPI.

- Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, ESCI (Web of Science), dbip, Inspec, Ei Compendex, and other databases.
Journal Rank: JCR - Q1 (Computer Science, Theory and Methods) / CiteScore - Q1 (Computer Science Applications)
Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.1 days after submission.
Recognition of Reviewers: reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal.
Journal Cluster of Artificial Intelligence: AI, AI in Medicine, Algorithms, BDCC, MAKE, MTI, Stats, Virtual Worlds and Computers.

Impact Factor: 4.4 (2024); 5-Year Impact Factor: 4.2 (2024)

Imprint Information Journal Flyer Open Access ISSN: 2504-2289

Latest Articles

Open Access Article: A Survey on Student Awareness of Spoofing Attacks in Saudi Arabia 28 pages, 761 KB

by Niddal H. Imam Big Data Cogn. Comput. 2026, 10(6), 170; https://doi.org/10.3390/bdcc10060170 (registering DOI) - 24 May 2026

Abstract The increasing prevalence of digital communication has made students a primary target for various cyber threats, including identity deception and impersonation techniques that can lead to data breaches and financial loss. In Saudi Arabia, where the youth population is digitally active and integrated [...] Read more. Show Figures

Open Access Article: An Attention-Driven Feature Fusion Approach for Multimodal Aspect-Based Sentiment Analysis 30 pages, 536 KB

by Ismail Ifakir, El Habib Nfaoui, Abderrahim Zannou and Asmaa Mourhir Big Data Cogn. Comput. 2026, 10(6), 169; https://doi.org/10.3390/bdcc10060169 (registering DOI) - 23 May 2026

Abstract Aspect-Based Sentiment Analysis explores sentiment trends related to specific opinion aspects and holds significant commercial potential for monitoring brand reputation, understanding customer satisfaction, and personalizing recommendations. However, traditional methods rely exclusively on textual input and often struggle when the target aspect is not [...] Read more.

Open Access Article: Symbolic Disentangled Representations for Images 28 pages, 7348 KB

by Alexandr V. Korchemnyi, Alexey K. Kovalev and Aleksandr I. Panov Big Data Cogn. Comput. 2026, 10(6), 168; https://doi.org/10.3390/bdcc10060168 - 22 May 2026

Abstract The idea of disentangled representations is to reduce the data to a set of generative factors that produce it. Typically, such representations are vectors in latent space, where each coordinate corresponds to one of the generative factors. The object can then be modified [...] Read more. (This article belongs to the Special Issue Artificial Intelligence Models and Cognitive Computing: Innovations from Algorithms to Intelligent Systems)

Open Access Article: Impact of Server-Side Aggregation on Federated Traffic Classification Under Heterogeneous Data Distributions 23 pages, 4279 KB

by Salam Allawi Hussein and Sándor R. Répás Big Data Cogn. Comput. 2026, 10(6), 167; https://doi.org/10.3390/bdcc10060167 - 22 May 2026

Abstract The growing prevalence of encrypted network traffic has rendered traditional payload-based inspection ineffective, shifting attention toward flow-level statistical analysis combined with machine learning. At the same time, privacy regulations and distributed network architectures make centralised data collection increasingly impractical, motivating federated learning as [...] Read more. Show Figures

Open Access Article: Large Language Models for Energy Market Analytics: An Exploratory Feasibility Study Across Geopolitical Monitoring, Commodity Summarisation, and Renewable Forecasting 23 pages, 677 KB

by Alex Krempasky, Erik Kajati and Peter Papcun Big Data Cogn. Comput. 2026, 10(6), 166; https://doi.org/10.3390/bdcc10060166 - 22 May 2026

Abstract Large Language Models (LLMs) offer opportunities for processing heterogeneous information streams relevant to energy-market decision-making, but their practical role in forecasting-oriented analytical workflows remains uncertain. This paper presents an exploratory feasibility study of LLM use across four energy-market tasks: geopolitical event monitoring for [...] Read more. (This article belongs to the Special Issue Large Language Models and Their Limitations)

Open Access Article: Domestic Factors Influencing Perceived Interference in Distance Learning: A Machine Learning Approach in Residential Built Environments 28 pages, 1742 KB

by Virginia Puyana-Romero, Angela María Díaz-Márquez, Christian Santiago Garzón-Pico and Giuseppe Ciaburro Big Data Cogn. Comput. 2026, 10(5), 165; https://doi.org/10.3390/bdcc10050165 - 19 May 2026

Abstract The change in learning methods to online/distance learning, catalyzed by recent health pandemics/social distancing requirements, has significantly changed how teaching occurs and what students experience in their learning spaces in regard to interference. New forms of interference exist, and they are related to [...] Read more. Show Figures

Open Access Article: Similarity to a Single Set 38 pages, 511 KB

by Lee Naish Big Data Cogn. Comput. 2026, 10(5), 164; https://doi.org/10.3390/bdcc10050164 - 19 May 2026

Abstract Identifying similarities in data is fundamental to discovery in science. Measuring or ranking similarity is a key way of reducing the dimensionality of data, is at the heart of many data intensive algorithms and can also be used directly for some applications. This [...] Read more. (This article belongs to the Section Data Mining and Machine Learning)

Open Access Article: The Geometry of Privacy: A Two-Stage Analysis of Generative Membership Inference in Federated Learning 20 pages, 3279 KB

by Borja Arroyo Galende, Patricia A. Apellániz, Alejandro Almodóvar, Silvia Uribe, Federico Álvarez and Juan Parras Big Data Cogn. Comput. 2026, 10(5), 163; https://doi.org/10.3390/bdcc10050163 - 19 May 2026

Abstract We study Membership Inference Attack (MIA) risk in Federated Learning through a two-stage lens that separates (i) whether a target client's contribution is detectable after aggregation and system noise (Stage I: Signal Survival) from (ii) whether a surviving contribution induces a generative membership [...] Read more. Open Access Article: Blockchain for Data Management: The DIG4ECO Use Case and Practical Lessons Beyond Theory 26 pages, 396 KB

by Andreas Polyvios Delladetsimas, Elias Iosif, Stamatis Papangelou and George Giaglis Big Data Cogn. Comput. 2026, 10(5), 162; https://doi.org/10.3390/bdcc10050162 - 18 May 2026

Abstract This article examines blockchain as an enabling technological component for data management tasks that are independent of currency-related functionality, a less-discussed aspect of a technology commonly associated with cryptocurrencies and decentralized finance (DeFi). Drawing on empirical findings from the DIG4ECO project as a [...] Read more. (This article belongs to the Section Big Data)

Open Access Article: Enhanced Quantum-Inspired Deep Learning with Multi-Head Attention and Contrastive Learning for Text-Based Dialogue Sentiment Classification 29 pages, 3392 KB

by Fumin Zou, Lei Zou, Feng Guo, Xunhuang Wang, Jianqing Weng, Tao Fang, Haocai Jiang and Xueming Wu Big Data Cogn. Comput. 2026, 10(5), 161; https://doi.org/10.3390/bdcc10050161 - 18 May 2026

Abstract This study introduces the Quantum-Inspired Pretrained Feature Embedding (ImprovedQPFE) model, a framework for dialogue sentiment classification. ImprovedQPFE integrates phase-pretrained complex embeddings, a bidirectional complex-valued GRU, a quantum-inspired attention mechanism, and supervised contrastive learning within a Transformer-based architecture, aiming to enhance feature discriminability under [...] Read more.
