Highly Accessed Articles

Article De-Anonymization Techniques in the Tor Network Using an Experimental Testbed by Ondrej Kainz et al. J. Cybersecur. Priv. 2026, 6(2), 72: https://doi.org/10.3390/jcp6020072 Published: 13 April 2026

Article Automating the Detection of Evasive Windows Malware: An Evaluated YARA Rule Library for Anti-VM and Anti-Sandbox Techniques by Sebastien Kanj et al. J. Cybersecur. Priv. 2026, 6(2), 69: https://doi.org/10.3390/jcp6020069 Published: 8 April 2026

Article Model Context Protocol Threat Modeling and Analysis of Vulnerabilities to Prompt Injection with Tool Poisoning by Charoes Huang et al. J. Cybersecur. Priv. 2026, 6(3), 84: https://doi.org/10.3390/jcp6030084 Published: 5 May 2026

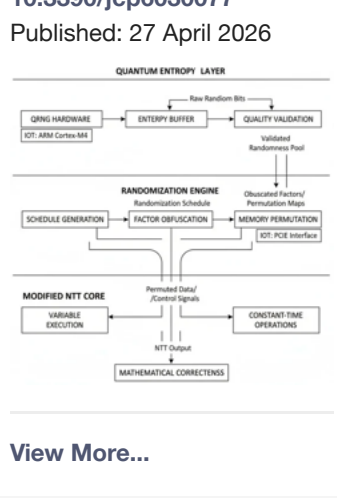

Review Securing the Cognitive Layer: A Survey on Security Threats, Defenses, and Privacy-Preserving Architectures for LLM-IoT Integration by Ayan Joshi and Sabur Baidya J. Cybersecur. Priv. 2026, 6(2), 63: https://doi.org/10.3390/jcp6020063 Published: 2 April 2026

Article Evaluating the Effectiveness of Information Security Management Systems: An Analysis Framework and Key Metrics by Safia El Moutaouakil et al. J. Cybersecur. Priv. 2026, 6(2), 73: https://doi.org/10.3390/jcp6020073 Published: 14 April 2026

Article An Empirical Assessment of Digital Forensic Process Reliability Using Integrated ISO/IEC 27037 and 27041 Standards by Zlatan Morić et al. J. Cybersecur. Priv. 2026, 6(2), 57: https://doi.org/10.3390/jcp6020057 Published: 30 March 2026

Article IoT-Oriented Digital Signature Defense Against Single-Trace Belief Propagation Attacks in Post-Quantum Cryptography by Maksim Iavich and Nursulu Kapalova J. Cybersecur. Priv. 2026, 6(3), 77: https://doi.org/10.3390/jcp6030077 Published: 27 April 2026

Journal of Cybersecurity and Privacy Journal of Cybersecurity and Privacy is an international, peer-reviewed, open access journal on all aspects of computer, systems, and information security, published bimonthly online by MDPI. Open Access High Visibility: indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases. Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the second half of 2025). Journal Rank: CiteScore - Q1 (Computer Science (miscellaneous)) Recognition of Reviewers: APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal. Journal Cluster of Information Systems and Technology: Analytics, Applied System Innovation, Cryptography, Data, Digital, Informatics, Information, Journal of Cybersecurity and Privacy and Multimedia.

Latest Articles Open Access Article 34 pages, 4530 KB A Multi-Group Usability Evaluation of a Human-Centred Privacy and Permission Management Framework (MIDA) by Nourah Alshomrani, Steven Furnell, Helena Webb and Alejandro Guerra-Manzanares J. Cybersecur. Priv. 2026, 6(3), 94: https://doi.org/10.3390/jcp6030094 (registering DOI) - 22 May 2026 Abstract Users encounter privacy and permission settings across digital platforms, yet often struggle to understand, locate, and manage them effectively. Despite regulatory efforts such as the General Data Protection Regulation (GDPR) and platform mechanisms like App Tracking Transparency, these challenges persist due to interface [...] Read more. (This article belongs to the Special Issue Current Trends in Data Security and Privacy—2nd Edition) Show Figures

Open Access Systematic Review 56 pages, 596 KB Systematic Artefact-Based Review of Government Digital Identity Programmes: Alignment, Maturity and Transparency by Matthew Comb and Andrew Martin J. Cybersecur. Priv. 2026, 6(3), 93: https://doi.org/10.3390/jcp6030093 (registering DOI) - 21 May 2026 Abstract Digital identity is increasingly treated as foundational infrastructure for digital economies and public services, yet national approaches remain fragmented and difficult to compare. This study presents a PRISMA-guided systematic artefact-based review of government digital identity programmes, using programme-relevant government artefacts as the review [...] Read more. (This article belongs to the Section Privacy) Show Figures

Open Access Article 18 pages, 19243 KB Design and Implementation of a Microgrid Testbed for Cybersecurity Analysis and Resilience Testing by Joseph Mikkelsen, Dominic G. De La Cerda, Yanwei Wu and Xiaoguang Ma J. Cybersecur. Priv. 2026, 6(3), 92: https://doi.org/10.3390/jcp6030092 (registering DOI) - 20 May 2026 Abstract A microgrid is a localized distribution network composed of electricity users who have access to local renewable and other energy sources. While the utility grid plays a critical role in the nation's economy, security, and the well-being of its residents, connecting microgrids to [...] Read more. (This article belongs to the Special Issue Building Community of Good Practice in Cybersecurity) Show Figures

Open Access Systematic Review 29 pages, 5329 KB Connecting the Dots: A Systematic Literature Review of Explainable AI, Cybersecurity, Human-Centered Design and Edge Computing by Gaia Cecchi, Fabrizio Benelli, Mario Caronna, Giulia Palma and Antonio Rizzo J. Cybersecur. Priv. 2026, 6(3), 91: https://doi.org/10.3390/jcp6030091 (registering DOI) - 19 May 2026 Abstract The incorporation of Artificial Intelligence (AI) into cybersecurity has become widespread, largely propelled by the emergence of Generative AI (GenAI) and Large Language Models (LLMs). While these technologies promise to revolutionize threat detection, they introduce profound challenges regarding explainability, trust, and deployment feasibility [...] Read more. (This article belongs to the Section Security Engineering & Applications) Show Figures

Open Access Article 37 pages, 10145 KB Feature-Engineered Trojan Malware Detection on Windows-Based IoT Gateways Using a Custom Deep Neural Network and Automated Monitoring Pipeline by Mazdak Maghanaki, Mohammad Shahin, Soraya Keramati, F. Frank Chen and Enrique Contreras J. Cybersecur. Priv. 2026, 6(3), 90: https://doi.org/10.3390/jcp6030090 (registering DOI) - 19 May 2026 Abstract The growth of Internet of Things (IoT) environments has expanded the attack surface of modern systems. Trojan attacks are a major challenge as they evade conventional detection mechanisms and operate silently within legitimate processes. This paper presents an automated Trojan detection framework for [...] Read more. (This article belongs to the Section Security Engineering & Applications) Show Figures

Open Access Article 37 pages, 1721 KB Recovering Error-Free Cryptographic Keys from Noisy Quantum Key Distribution and Independent Eavesdropper Detection on the Receiving End by Dina Ghanai Miandoab, Brit Riggs, Nicholas Paul Navas and Bertrand Cambou J. Cybersecur. Priv. 2026, 6(3), 89: https://doi.org/10.3390/jcp6030089 (registering DOI) - 14 May 2026 Abstract This work considers the performance and feasibility of a challenge-response pair (CRP)-based key generation method integrated with multi-wavelength Quantum Key Distribution (QKD). In this design, Alice and Bob use independently derived information from the CRP mechanism to encode and recover the key without [...] Read more. Show Figures

Open Access Article 43 pages, 752 KB Recursive Augmented Fernet (RAF) Token: Alleviating the Pain of Stolen Tokens by Reza Rahaimehr and Marten van Dijk J. Cybersecur. Priv. 2026, 6(3), 88: https://doi.org/10.3390/jcp6030088 (registering DOI) - 13 May 2026 Abstract A robust authentication and authorization mechanism is imperative in modular system development, where modularity and modular thinking are pivotal. Traditional systems often employ identity modules responsible for authentication and token issuance. Tokens, representing user credentials, offer advantages such as reduced reliance on passwords. [...] Read more. (This article belongs to the Special Issue Applied Cryptography) Show Figures

Open Access Article 36 pages, 814 KB Phase-First Gaussian Modulation for Resilient Continuous-Variable Quantum Communication Under Adversarial Disturbances by José R. Rosas-Bustos, Jesse Van Griensven Thé, Roydon Andrew Fraser, Nadeem Said, Sebastian Ratto Valderrama, Mark Pecen, Alexander Truskovsky and Andy Thanos J. Cybersecur. Priv. 2026, 6(3), 87: https://doi.org/10.3390/jcp6030087 (registering DOI) - 13 May 2026 Abstract Continuous-variable quantum communication (CVQC) operates under finite-resolution inference (finite data windows), calibration uncertainty, and estimator tolerances and hardware control/readout limits that can be exploited by structured and adversarial disturbances. We study a feedback-inspired phase-space modulation strategy for implementation-layer resilience under DoS-like receiver-observable stress [...] Read more. (This article belongs to the Section Cryptography and Cryptology) Show Figures

Open Access Article 32 pages, 2513 KB CryptoKANs+: KAN-Inspired Self-Learning Polynomial Networks for Efficient Privacy-Preserving Machine Learning by Omar Tahmi, Chamseddine Talhi and Hakima Ould-Slimane J. Cybersecur. Priv. 2026, 6(3), 86: https://doi.org/10.3390/jcp6030086 - 6 May 2026 Abstract Processing sensitive data in cloud-based neural networks raises privacy concerns, which Homomorphic Encryption addresses by enabling privacy-preserving machine learning. In our previous work, we introduced CryptoKANs, enabling efficient KoImgorov–Arnold Network (KAN) inference over encrypted data via polynomial approximation of spline-based activation functions [...] Read more.
